SWMS vs Clean Care — Gap Analysis

Oct 7, 2026 · @PremierCement

The biggest gap is who can complain: a SWMS complaint must belong to a registered household, while Clean Care accepts a photo-and-GPS report from any citizen anywhere in the city. SWMS is far ahead on operations (QR/GPS-verified collection, routes, billing, fleet, KPIs) but has no citizen-facing side yet.

What SWMS has today

SWMS (Smart Sweep · SWMS · KCC) is a staff web panel with 14 modules; every figure below is as shown on screen on 7 Oct 2026.

Module	What's there
Dashboard	Collection efficiency 4%, charge collection 9%, coverage 69%, vehicles ready 60%; 7-day collection trend; top 10 households; collector leaderboard; recent QR/GPS-verified visits; waste by zone (estimated)
Live map	Collector positions refreshed every 20 seconds; 3 of 5 vans tracked; on-route/off-route; households with dues pinned
Holding master	42 holdings, 38 households, served/unserved status, GPS pin status (18 have no pin)
Surveys	Door-to-door survey → verify → convert to holding
Daily collection	Today's round by route and time window, QR scan, Collect/Skip per household, offline sync
Routes / route plan	10 routes tied to roads, assigned collectors, coverage gaps (20 households not on any route)
Complaints	Tickets CMP-xxxxx; types: missed collection, bin overflow, billing dispute, staff behaviour, other; priority urgent/high/medium/low with SLA hours (urgent target 4 h); app/SMS channel; assign, advance, resolve, reopen, notes, staff photos, activity log, export
Billing	Monthly auto-bills, payments recorded by staff (cash, bKash, Nagad, Rocket, bank), receipts, CSV

Module	What's there
Fleet	Vans, collector assignment, maintenance log, fuel efficiency, document-expiry alerts (fitness, tax, insurance, route permit)
Collectors / agencies	Collector list with license, coverage, on-time %, attendance; KCC in-house plus one private agency with contract dates
Reports	Service and collection, collector-wise waste, billing, reconciliation, customer, KPI scorecard; daily/weekly/monthly; Excel, CSV, PDF
Users	Roles: collector, supervisor, agency admin, super admin, KCC viewer. No citizen role
Other	Sweep AI assistant, Bangla/English, dark mode, staff notification bell

Gaps against Clean Care

Fourteen gaps, most important first; items 1–4 decide whether citizens can use SWMS at all.

#	Feature	Clean Care	SWMS now	What to build
1	Who can complain	Any citizen, anywhere	Only a registered household; the ward is "taken from the holding — not editable"	Complaints by GPS location with no household needed; a citizen account separate from the household
2	Citizen front end	Android app + public website	Staff web panel only; "App" channel exists but there's no citizen app	Citizen app and a public landing page
3	Complaint categories	10 categories × 4–7 sub-issues (road, drainage, canal, hospital, events…)	5 household-focused types	Category → sub-issue tree as master data, with SLA per sub-issue

#	Feature	Clean Care	SWMS now	What to build
4	Evidence from the citizen	Camera photo, 2-min voice note, description, GPS pin	Staff attach photos after the fact; no voice; location = holding	Citizen photos, voice note, map pin; required before/after photos when resolving
5	Citizen updates	Push notification when resolved, review	None; the notification bell is for staff	FCM push and SMS at each status change; tracking ID
6	Feedback	Rating and review, officer reviews	None	Star rating, citizen reopen, satisfaction report
7	Chat and support	Live chat, complaint chat, customer care, emergency	Internal notes only	Complaint chat thread, support console, emergency category with 2 h SLA
8	Notice board	Category notices with urgency, views, likes	None	Ward-targeted notices with push
9	Vehicle tracking for citizens	Advertised (not shown in app)	Exists for staff (20-second live map)	Show the citizen their road's van, ETA, and a "van is near" alert — SWMS can beat Clean Care here
10	Collection schedule	Government holiday calendar	Route time windows exist internally	Show each household its pickup day and time, with a reminder
11	Paying bills	Not offered	Staff record payments; no online payment	Citizen views bill and pays via bKash/Nagad gateway; auto receipt
12	Transparency	Public impact counters (showed 0)	KPIs internal only	Public dashboard from the existing KPI scorecard

#	Feature	Clean Care	SWMS now	What to build
13	Content screens	Gallery, government calendar, officer messages, About	None	Content module in the admin panel
14	Legal and Play Store	Privacy policy, account deletion page, API status	Consent line on the login page only	Privacy policy, account deletion (app + web), status page

Where SWMS is ahead

QR + GPS proof of every collection visit, route planning, offline field capture, billing and reconciliation, fleet maintenance and document-expiry alerts, agency contracts, the KPI scorecard and Sweep AI. Clean Care shows none of these.

Data issues to fix before a citizen launch

- Some Khulna-ward holdings and surveys show the district as Bagerhat, Barguna, Bandarban or Bhola.
- Test records ("Test", "ABC", "gyg") are mixed in with live data.
- 18 of 42 holdings have no GPS pin, so they can't be routed and wouldn't get van-ETA alerts.
- Median complaint resolution is 363 hours across the 6 resolved tickets, far past the 4-hour urgent target; citizen-facing SLA timers would expose this immediately.

Method and sources

SWMS was reviewed on 7 Oct 2026 by reading every menu screen while signed in, without saving anything; complaint form fields come from the site's screen text because the form did not open in the browser. Clean Care was reviewed from its public website and 34 screenshots of its Android app.
